

## ≡ SeaChange® Game Now Demo System™ v2.0

The SeaChange® Game Now Demo System™ is a portable, turnkey, standalone system used to demonstrate Game Now Community Services and G-cluster game play client functionality.

SeaChange® Game Now™ is a game management system used by service providers and broadband operators to promote, manage, and build a community for games – regardless of who provides the games, the languages the game is authored in, or where the game is executed. Video can be streamed to set top boxes, PC's or mobile devices such as a phone.

### Games Portal Application

- Reference portal design for listing available games and community services

### Game Community Services

- Nicknames, multiple nicknames for household
- High scores lists
- Multiplayer games support

### Future community service applications:

- Buddy lists and Chat Services
- Invite a buddy to play or join a multiplayer game session
- Game referrals
- Private high scores lists
- Earn & manage credits towards free games, VOD (video on demand) videos, or rankings

### COMPONENTS

- **Dual purpose PC monitor/TV**
- **Game content included. See list below.**
- **Approximately 150 pounds**

### NOTES

- This product is not sized to support game integration or testing activities. Use the SeaChange® Game Now Lab System™ to support testing activities and the SeaChange® Game Now Integration System™ to support game software development and integration.
- This system is intended to be a stand-alone system and is not qualified with Axiom™ in this configuration.
- If the customer chooses to dismantle their Demo System, the MediaServer GES that is attached to this system may be attached to the Game Now Lab System, Integration System or a production system, however the Game Now Control Server ONE configuration cannot be reconfigured into a different type of machine.
- All equipment is fully assembled and tested in manufacturing.
