

SeaChange® QuickSilver™ Content Browser

The SeaChange® QuickSilver™ Content Browser contains all the hardware and software that you require to load your MPEG-2 content onto a SeaChange VOD server, browse the available content using an attractive user interface branded with your logo and view it on TV through an IP set top box. No RF cabling! No extra equipment to order! Video streams and signaling are all transmitted over IP.

Need to create content? The Content Browser comes with the SeaChange® QuickSilver™ Transport DVD Conversion Station so that you can convert existing DVDs into ready-to-load DVDs on Demand that can be viewed through the Content Browser client. Select specific content to playback, or use the “play all” feature.
